

McDonald's Reviews Dataset:

For our data set for this project, the unit of observation is McDonald's customers as each row represents a detailed customer review that describes their experience at McDonald's.

- *reviewer_id*: The *reviewer_id* variable is a unique identifier for each review to distinguish between different McDonald's customers.
 - It is important to note that our data contains 33,996 total reviews, each coming from a unique customer.
- *review*: The *review* variable is the textual context of the review detailing the customer's experience at McDonald's which highlights the reason for their satisfaction or dissatisfaction with their restaurant experience. This is where we will find common themes that come up when customers reflect on their experience.
 - Example: "The staff are very friendly and they do their job perfectly"
- *rating*: The *rating* variable is the numeric rating, on a one to five star scale, provided by the customer in conjunction with the review of their experience. This is how we will distinguish between positive and negative restaurant reviews.

...	count
rating	
5 stars	10274
1 star	9431
4 stars	5787
3 stars	4818
2 stars	3086
